A TECHNOLOGY TO PROTECT OUR MOTHER EARTH

# TECHNOLOGY TO PROTECT OUR MOTHER NATURE/EARTH

## Encouraging the growth of creative solutions

We see a lot of pollution in all forms which is impacting our mother earth the result of which is global warming, just putting an idea to reduce air pollution which could help reduce carbon dioxide in the nature. The climatic conditions have been changing a lot due to air pollution, the seasons like summer, rainy, winters have changed a lot some places it's too hot, while some places it rains a lot and at some places it's too cold which is impacting lives of so many human creatures and our mother nature/earth. All of this is causing a lot of expenditure to not only the government but also to the public.

# PROPOSED SOLUTION -1

## SOLUTION TO ADDRESS GLOBAL WARMING

The idea is to have electric roads with solar energy to get charged in the day time by electric roads i mean just like the escalators we have on airports where in a person stands and the escalator moves which would help reduce air pollution to a great extent which will also reduce the cost of building roads every time helping the government public sector domain. Hopefully Once the air pollution is reduced slowly the climatic conditions will get back to it's normal state with respect to summer, rainy, winter seasons which today has changed a lot.

# PROPOSED SOLUTION -2

When our mother nature/earth is saved only then we would survive and we could have opportunities to create jobs, live our lives healthy where health of our mother is taken care off human creatures health is taken care off. All i mean to say is we should save our nature along with other priorities in life to lead our lives happily. This is just an idea and a try to save mother nature since as am concerned about it since my college days where I had created a html project on global warming.

The background of the image is a dark blue gradient. On the left side, there is a complex, glowing blue molecular structure. It consists of numerous interconnected hexagonal and pentagonal rings, some of which are highlighted with bright blue light points. The structure appears to be a network of atoms and bonds, extending from the top left towards the center of the image.

# THANK YOU!!

LETS WORK TOGETHER AS A TEAM TO SAVE MOTHER  
NATURE/EARTH AS IT'S A COLLECTIVE RESPONSIBILITY ♣
